FOR MEN & WOMEN

Areas of expertise

LASER HAIR REMOVAL

Any skin colour, any part of the body, male and female.

A rapid, gentle way of removing unwanted hair, medically proven to give a permanent reduction. Our expert laser therapists use the most up-to-date technology.

The confidence of smooth hair-free skin is priceless and the treatment may not cost as much as you think!

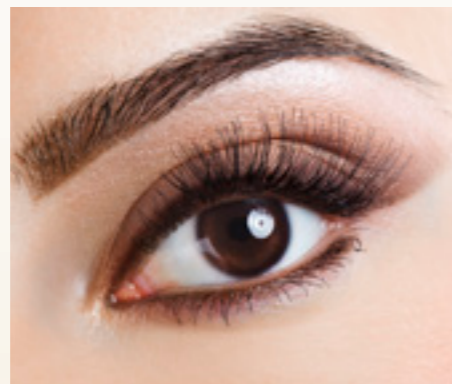

EYELIDS & BAGS

Restore a more youthful appearance by tightening your droopy or hooded eyelids.

As we get older, it is common to develop lower eye bags or hooding of the upper eyelid which can make us look and feel tired, adding years to the whole face.

Blepharoplasty is a simple operation to improve hooded upper and baggy lower eyelids. It is available at the Chiltern Medical Clinic as a day case procedure under the care of our experienced oculoplastic surgeon, Ms Annette Bacon MA, FRCOphth.

FACIAL VEINS

Do you feel facial veins or vascular lesions are detracting from your appearance?

It is possible to safely and effectively remove spider-like veins on the face and nose called telangiectasia.

With a quick and easy laser treatment, there is no longer a reason you must live with this condition.

We can also treat facial redness, Campbell de Morgan spots, Spider Naevi, Rosacea, Port Wine Stains, and Cherry Angiomas.

LEG VEINS

Now is the time to treat your leg veins.

Be free of leg veins and enjoy the freedom to wear whatever your heart desires without having to worry about your legs.

Veins are painlessly scanned to identify any larger problem vessels prior to treatment. Dr Stephen Tristram MB Ch B D(Obst) RCOG, a specialist well respected in his field.

SKIN REJUVENATION

Create smoother, brighter skin and roll back the years using eDermastamp.

This is an electronic, micro-skin needling procedure that stimulates your skin so that it will regenerate and repair itself naturally, resulting in smoother, brighter, younger and healthier looking skin.

It can be used as a key treatment in rejuvenating skin with the following conditions:

- ◆ Acne scars
- ◆ Photo-damaged and ageing skin
- ◆ Facial and décolleté lines and wrinkles
- ◆ Stretch marks

LINES & WRINKLES

Do you feel that the signs of ageing are damaging your self-esteem and confidence?

Have you noticed your cheeks losing volume or dark hollows developing below your eyes?

Hyaluronic acid skin fillers and other injectables are excellent for restoring lost volume and adding definition around the nose, mouth, cheek and chin areas of the face.

In addition, our doctors have mastered the techniques of safe and effective treatment to difficult and complex areas of the face, such as the temples, eyebrows and tear trough, to achieve very effective improvements in the facial contours in a safe manner.
